

DASCOIN SET TO TRADE ON PUBLIC EXCHANGES

LONDON: APRIL 23, 2018

DasCoin, the Currency of Trust and the store of value within the Das ecosystem, has completed a well structured two-year journey of preparation and strategic activity to develop its business platform. The company is delighted to announce it is now ready to launch onto public exchanges in conjunction with a landmark launch event to be held in London on April 27, 2018.

To safeguard its position as the Currency of Trust, DasCoin will only be traded on public exchanges that operate the same strict “Know Your Customer” authentication protocols that underpin DasCoin itself. DasCoin’s journey to public launch has been meticulously plotted over the course of two years.

Michael Mathias, CEO of DasCoin, said: “We have already delivered on two major milestones. First was the launch of our DasCoin blockchain on March 31, 2017, when we minted our first coin, and then on September 30 we launched a blockchain-based exchange that is running 24 hours a day.” Mathias continued: “We have hit our two first goals as stated and next week we will have our coin trading on our public exchanges. This will be the biggest moment yet for the Das ecosystem and we look forward to welcoming new members into our community as we enter the next phase of the DasCoin story.”

More than 750 million DasCoin have already been minted since March 2017. Members of the NetLeaders community purchase licenses giving them access to a certain number of Cycles – units of capacity – on the blockchain. These Cycles can either be used for a variety of services or submitted to the DasCoin Minting Queue and converted into DasCoin. There will be a total supply of 8.589 billion DasCoin.

DasCoin possesses and operates best-in-class blockchain technology based upon BitShares’ distributed ledger technology, known as Graphene. BitShares is one of the longest ledgers in existence and is one of the highest performing ledgers with capacity exceeding 100,000 transactions per second.

And on April 1, DasCoin released its codebase onto Github to ensure that every bit of information on its blockchain can be shared or queried, making DasCoin’s blockchain transparent.

Additionally, DasCoin are not “mined” like those of Bitcoin and other proof-of-work coins. The “minting” process results in a significant reduction in energy consumption, as well as a more equitable distribution of value.

About DasCoin: DasCoin is a better way to store and exchange value and is the next step in the evolution of money.

DasCoin is the blockchain-based currency at the center of an innovative digital asset system that seeks to optimize the strengths and eliminate the weaknesses of existing currency systems. It is fast, efficient, balanced, secure and scalable.

DasCoin is focused on creating a digital currency that delivers superior performance through greater operational efficiency, increased transaction capacity, wider distribution, better governance and greater regulatory compliance. Protected by industry leading security protocols and a permissioned blockchain, DasCoin is a pioneer in the sector with the goal of becoming the world’s first mainstream digital currency.
